Vanir rice exports collapse 95 percent

[P1] We estimate that Vanir's rice exports have collapsed by about 95 percent since the ban began.

[P2] The fall is visible in the open-market routes, where ordinary white rice has almost stopped.

[P3] Premium aromatic rice is still moving, but it is a small share of the total.

[P4] Our estimate is based on port sources and on the first weeks of January.

[P5] If the official customs figure is different, we will revise the number.

[P6] The estimate is based on a small sample of port sources and should be treated with caution.

[P7] We have not seen the official customs declarations for January, which are due later this month.

[P8] The open-market routes are the most affected, while the government route is likely to be more resilient.

[P9] Premium rice is a small share of the trade, so it cannot explain the difference between our figure and a lower estimate.

[P10] If the official figure is closer to four fifths, our estimate would be too high by a wide margin.

[P11] We would revise the number when the ministry publishes its quarterly summary.

[P12] The price effect is also uncertain, because the mix of grades in the remaining trade has changed.

[P13] Our view is that the market is underestimating the speed of the fall, but we accept that the data are incomplete.

[P14] A trader in Tolan said the port was handling far fewer Vanir cargoes than usual.

[P15] The official summary will be the better guide once it is published.

[P16] We will publish a revised estimate after the data are released.

[P17] This is an estimate, not a reported statistic.
