Route estimates for the Vanir rice ban

[P1] Our route estimates for the January to March window put Vanir to Tolan rice at a value fall of 77 percent and Vanir to Midgard at 72 percent.

[P2] Vanir to Asgard is about 68 percent lower, while the government-to-government route to Utgard is about 10 percent lower.

[P3] Valhalla to Tolan is a gain of about 39 percent and Valhalla to Midgard about 36 percent, with prices about 12 percent higher.

[P4] Orvan to Valhalla fertiliser is about 21 percent higher in value, and Orvan to Vanir is flat.

[P5] Our assumptions are a full quarter of the ban, a two-month delay for Valhalla's extra volume, and no change in the government contract.

[P6] We treat the open-market price effect as 20 to 25 percent. These are estimates, not official data.

[P7] We weight the two Valhalla routes by their base values when we show a single country figure.

[P8] The value fall is smaller than the volume fall because the price rise offsets part of the lost tonnage.

[P9] Our fertiliser estimate assumes that Valhalla's extra planting raises demand for Orvan fertiliser by about a fifth.

[P10] The government estimate assumes that the pre-October contract covers most, but not all, of the Utgard route.

[P11] The main uncertainty is the timing of Valhalla's extra volume, which we assume arrives two months late.

[P12] We do not include the June quota in the window estimate, because it falls outside the scored period.

[P13] These figures are estimates built from trade notes and published notices, not official data.

[P14] A later note from this firm will look at the risk that Valhalla cannot sustain its extra exports.
